

# INTRODUCTION

## PHOTOSHOP CC

2020

### Start with the basics

Making your workflow faster and easier is always good, but taking the time to learn all the tips and tricks takes time. But once you learn these tips, tricks and shortcuts, you'll be efficient in creating, editing, color correcting and retouching documents in Photoshop.

Due to the complexity of Photoshop, there will be many techniques covered, but these are not the only ways to achieve great results. There are many other resources on-line and in books that can help you along with your quest for deeper and more consistent knowledge of Photoshop.

This is the beginning of what Photoshop does, how the interface looks and functions as well as a basic knowledge of images, pixels, color and how to manage these for outstanding results.

### Tool Bar

A good way to start is to take a close-up look at the Tool bar and it's keyboard shortcuts. Access this under Window>Tools.

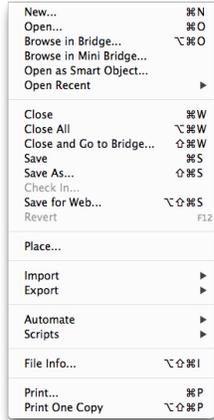

<b>Move Tool (V):</b> Select/move layers or objects			<b>Marquee Tool (M):</b> Select as a square, rectangle, oval or circle.
<b>Lasso Tool (L):</b> Select objects - (Lasso, Polygon, Magnetic)			<b>Quick Selection (W):</b> Selects objects with certain tolerances - (Magic Wand, Object Selection)
<b>Crop Tool (C):</b> Crops the image - (Slice Tool, Perspective Slice Tool)			<b>Frame Tool:</b> Creates a linked file that is easily cropped the same way in Design crops and image.
<b>Eye Dropper Tool (I):</b> selects colors - (Ruler)			<b>Spot Healing Brush Tool (J):</b> Corrects imperfections - (Healing Brush, Red Eye, Patch Tool, Content Aware Move)
<b>Brush Tool (B):</b> Paints/draws (Pencil, Color Replacement Tool)			<b>Rubber Stamp Tool (S):</b> Clones parts of the image
<b>History Brush Tool (Y):</b> Paints back to history			<b>Eraser Tool (E):</b> Erases selected parts of the image - (Magic Eraser, Background Eraser)
<b>Gradient Tool (G):</b> Create gradients - (Paint Bucket)			<b>Sharpen/Blur:</b> Sharpen/blur/smudge selected image areas
<b>Dodge/Burn Tool (O):</b> Darkens/lightens areas			<b>Pen Tool (P):</b> Create and edits paths
<b>Type Tool (T):</b> Creates type			<b>Path Selection Tool (A):</b> Paths can be move or edited
<b>Shape Tool (U):</b> Creates shaped paths			<b>Hand Tool (H):</b> Moves the image around the screen (Rotate View)
<b>Zoom Tool (Z):</b> Zoom, zoom			<b>Additional Tools:</b> Tools that do not appear in the tool bar due to the chosen workspace can be added from here.
<b>Foreground Color</b>			<b>Background Color ("D" resets to Black and White, "X" flips the colors from foreground to background)</b>
<b>Quick Mask Mode (Q)</b>			<b>Screen Mode (F):</b> Cycles through three screen modes.

## Help

## Menus

Shown is a list of the menus in Photoshop CS6. Differences between the Mac and PC platforms are minimal, with the main difference being the PC lacks the InDesign stand alone menu and incorporates those menu items in the File and Edit Menus.

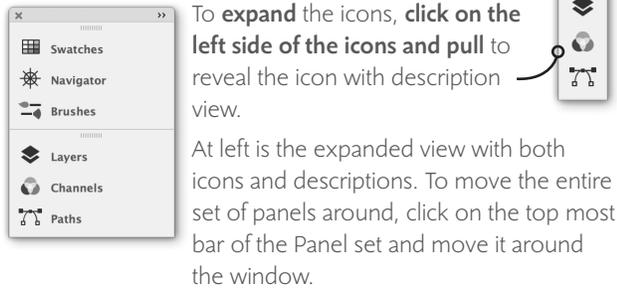

Next to many of the menu items are their related shortcuts for moving faster. On the Mac, those modifier keys are the **OPTION** ⌘, **COMMAND** ⌘ and **SHIFT** ⇧. On the PC the **OPTION** = ALT and **COMMAND** = CONTROL.

## Panels (Palettes)

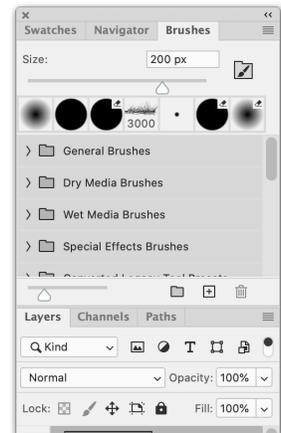

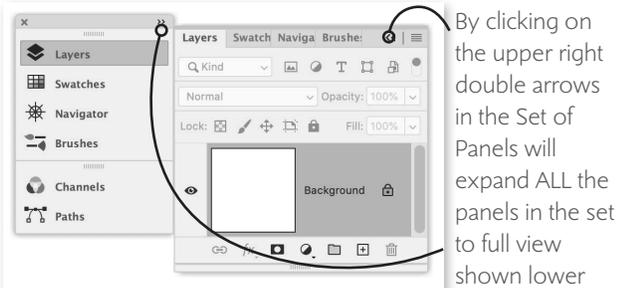

Photoshop Panels (called Palettes in older versions... but they are all the same) are all accessed under the Windows Menu.

Even more Panel features that can be more daunting than Photoshop itself. The trick is getting the Panels to snap, window shade fly out and display like you want them to. Here's how.

One view the Panels can be in is the **Icon View**. All the Panels are collapsed into icons to save space. Click on the icon and the Panel will fly-out revealing the full panel to access its functions and options.

Click on any of the icons or descriptions and the panel will fly-out as shown below left. To collapse the panels back to the condensed view, click on the double arrows in upper-right of the Panels.

Panels can also be nested or sitting alone on the desktop not nested in sets. To remove a Panel from a set, **click on the NAME of the Panel in the Panel Tab** and pull away from the layer set or nest.

**To nest multiple Panels into a set**, repeat the step above and drag the Panel next to the name on the tab of the Panel you want to nest them into.

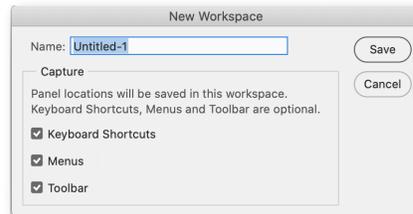

Panels can also be snapped together top and bottom or left and right. To Snap the Panels, click on the name on the Tab and drag the Panel next to another Panel or below/above a Panel.

To **close a set of Panels**, click the circle in the upper left of the set.

To access Panel specific command and options, click on the icon  on the upper right of the Panel.

## Workspaces

In Photoshop, you can save the location of your panels, your custom key board shortcuts and menu customization by using Workspaces. Access Workspaces under the Windows Menu. Name your workspace and save it for later access.

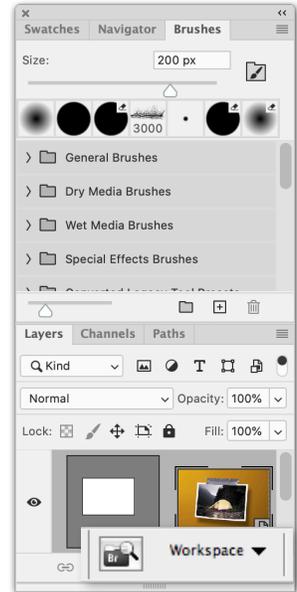

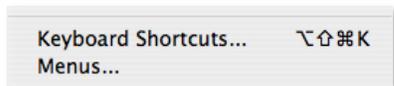

## Preferences

Preferences for Tools, Menus, Keyboard Shortcuts or Workspace Defaults can be set for your preferences.

Under the Edit menu, choose Keyboard Shortcuts or Menu...

Keyboard shortcuts can be created or edited and saved in a Workspace as well as menu customizing. By customizing menus, you can remove menu items you don't use or color code menu items for faster access.

## Control Bars

Each Tool that is selected in the Tool Bar has a Control Bar related to it and its function. These Control Bar settings can be numerous and deliver a mind boggling array of settings, preferences and drop down menus. Here is a partial list of options for the associated Tool.

**Move Tool Options**

**Selection Tool Options**

**Quick Selection Tool Options**

**Crop Tool Options**

**Clone Stamp Tool Options**

**Eraser Tool Options**

**Brush Tool Options**

**Gradient Tool Options**

**Sharpen/Blur Tool Options**

**Pen Tool Options**

**Type Tool Options**

## Guides

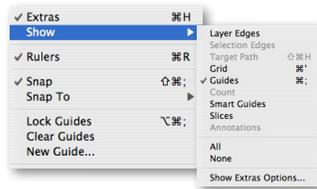

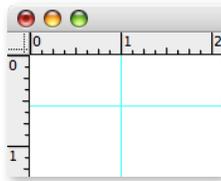

Guides can be pulled from the rulers on the top and left side of a document. To show the rulers, choose View>Rulers (**COMMAND + R**).

Guides can be turned on and off (**COMMAND + ;**), locked so they cannot move or cleared.

To remove a single guide, click on the guide with the Move Tool and drag it off the document towards the ruler that it was pulled from. To remove several guides in a document, choose View>Guides>Clear Guides.

To set a Guide in a specific location, choose View>Guides, New Guide...

Snap To allows the selection or object to snap to a guide or grid. To activate Snap, choose View>Snap (**SHIFT+COMMAND+;**). To set the item you want to Snap To, choose Snap To...

## Views

### The Zoom Tool

Use the Zoom Tool (hit Z on your keyboard) to zoom in on the page (hit **OPTION** and the + inside the Zoom tool turns into a - and you can zoom out). But if you use the **SPACEBAR + COMMAND** it will turn into the Zoom Tool (no matter what tool you are currently using).

People like to use the Zoom Tool to click and click and click to zoom in. Or just drag over the area with the Zoom Tool to zoom in and it will fit the defined area to the window.

- Use the Zoom Tool (**Z**) or Choose View>Zoom In, Zoom Out, Fit On Screen, Actual Pixels or Print Size
- **COMMAND +** Zooms in
- **COMMAND -** Zooms out
- **COMMAND + 0** Fits in Window
- To Zoom at 100%, **double click the Zoom Tool**
- To Fit to Window, **double click the Hand Tool**
- Use the Control Bar Buttons

## Scroll Zoom

If your mouse has a scroll wheel, try **OPTION + SCROLL** to zoom in and out. Try it!

## The Hand Tool

Sure, you can use the Hand Tool (just hit H on your keyboard) to move around the page. But if you use the **SPACEBAR** it will turn into the Hand Tool (no matter what tool you are currently using). This works all the time with this exception... when you are editing type. Hit the spacebar then and you just add spaces, but use the **OPTION** key and it turns into the Hand Tool.

Oh... you can also double click on the Hand Tool in the tool bar and it will fit the page to the window.

## Everything Disappeared?

You were just working, hit a key and all but the document is left open, what gives? Hit the TAB key and all the panels and palettes come back.

## Scrubby Zoom

A new feature in CS5 is Scrubby Zoom, found in the Control Bar when you have the Zoom Tool active. Pick a spot on the document, click and drag over it like you would using the zoom tool, the difference is as you drag you'll get closer to the area you want to zoom in on.

## Screen Modes

Screen Modes allow viewing of files with a black background, gray background or within a floating window. (**F**) cycles through these Screen Modes or the icons at the bottom of the Tool Palette.
